DUCTILE IRON RECTANGULAR COVERS

GENERAL INFORMATION

One-part square or rectangular cover and frame units are suitable for use over shaft, pit or access openings such as:

- Sewers
- Stormwater drains
- Pressure pipelines
- Cables
- Septic tanks
- Vanes and metering

Two-part and three-part rectangular cover and frame units are designed for openings where the length is substantially larger than the width. Typical applications include:

- Cable jointing pits
- Interceptor trap pits
- Any shallow pit where a large working area is required

STANDARD REGULAR COVER UNIT FEATURES

301C - Rectangular Concrete Unfilled Unit

Strength and Durability

- Made from ductile Iron 500-7 to AS1831 standard for superior strength to weight ratio.
- Concrete Infilled units to be filled with structural grade concrete to AS3996 standard.

Stability Under Load

- All GATIC cover and frame seating surfaces are machined for accurate, precision fit.
- Undercut seating surface design on one side of unit prevents movement of cover under load.
- Frame bar design ensures stable, permanent keying of frame in surrounding concrete.

High Seating Capability

- All bolted frame joints are sealed to minimise passage of water through the joints.
- With application of GATIC sealing compound, the machined seatings give a watertight and gas-tight fit between cover and frame.

301S - Rectangular Solid Top Unit

Economical Design and Choice of Loading Capacities

- Ribbed cover design gives maximum strength for minimum weight of material.
- GATICs range of covers give a choice of load capacities to enable accurate selection to closely suit particular loading requirements. This avoids higher cost of excessive design load.

Easy, Safe Operation

- Lifting keyholes are designed to suit GATIC’s range of lifting keys and devices.
- Keyholes designed to ensure that keys cannot rotate and disengage accidentally.
- Plastic plugs are fitted to exclude ingress and dirt.
- Conformance with AS3996.

Cover to Frame Matching and Orientation

- Covers and frames are manufactured in accurate matching assemblies. The cover of one unit will not necessarily fit the frame of another assembled unit.
- A cover seats properly in its frame in one orientation only.

MODIFICATION OPTIONS

Increased Versatility For Standard Units

The range of modifications available has been designed to give standard GATIC units the ability to meet special needs of appearance, security, identification, operation and other functional requirements. GATIC is committed to meet your standard and non-standard modification/option requirements. Contact our nearest GATIC Sales office for further inquiries.

Available Modifications:

EDGE STRIP TRIMS

- Edge strips are designed for enhancing the appearance of GATIC units installed in floors or other areas having a high quality finish, e.g., ceramic or lino tiles, terrazzo, parquetry.
- Edge strips are available in brass and stainless steel in a range of projecting heights to match different types and depths of surface finish.
- Keyhole extensions made from material matching the edge strips are fitted to covers to provide access to keyholes below the finished surface.
- Recommended for use with Class B units only.
- Specifying Edge strip option:

<tr>
<td>Cover</td>
</tr>
</tbody>
</table>

SECURITY BOLT-DOWN

- Security bolt-down is designed to withstand in-service loading as specified
- Non corrosive fasteners
- Bolt provision can be stainless steel, security fasteners or tamper proof fasteners
- Specifying bolt-down option:

| Class B + D 2 x 10mm S/S Bolt |
| Class G 2 x 12mm S/S Bolt |
| Standard Configuration |
| Stainless steel socket head bolt (Security fastener and tamper proof bolt optional) |

INSERT INSPECTION COVERS - MADE TO ORDER

- GATIC covers can be supplied with small circular insert covers of 152mm, 229mm or 305mm frame opening diameter.
- For applications where an underground installation requires frequent inspection and where full access cover is infrequently required.
- Typical applications are over petrol tanks, sewerage pumping stations, septic tanks, valve pits and over grease and oil interceptor traps.
- Load rating will need to be recalculated, depending on location of inspection cover.

NOTE:

- When specifying an insert cover which is not centrally located, a sketch showing the locating dimensions ‘X’ and ‘Y’, and insert cover diameter must be provided. This information must also be provided when the insert cover forms part of a multipart cover.

The illustrations shown are intended to serve as a guide only. Detailed drawings and specifications can be obtained by contacting the nearest GATIC office. GATIC reserve rights to change product specifications shown without prior notice.
